Identifying compounds that alter inhibition of cone opsin kinase polypeptide activity for treating a conditions related to cone visual signaling, comprises mixing a compound with a cone opsin kinase and with an inhibitory polypeptide.

Example 4; Page 45-46; 6lpp; English.

The present invention relates to novel human cone opsin kinase (G-protein coupled receptor kinase 7; GRK7) and their corresponding polymucleotides. The invention further relates to a method of identifying compounds that calter the inhibition of GRK7 polypeptide activity which involves mixing a contest compound with GRK7 protein and an inhibitory polypeptide and cativity by the inhibitory polypeptide. GRK7 sequences are useful for treating conditions related to come visual signalling (e.g., night cativity by the inhibitory polypeptide. GRK7 sequences are useful for treating conditions related to come visual signalling (e.g., night cativity by the inhibitory polypeptide. GRK7 sequences are useful for the singular conditions related to come visual signalling (e.g., night cativity, visual resolution or in adapting to changes in light cativity, visual resolution or in adapting to changes in light cativity. Outh disease or dominant congenital stationary night cativity (e.g., chronobiological desynchrony, cativity (e.g., chronobiological desynchrony, cativity (e.g., chronobiological desynchrony, cativity (e.g., chronobiological desynchrony, cativity is beneficial, e.g., decreased colour sensitivity or other cone cativity is beneficial, e.g., decreased colour sensitivity or other cone photoreceptor wisual signalling or circadian rhythm, as molecular to come photoreceptor visual signalling or circadian rhythm, as molecular cand vision resolution. They are also used as gene therapy tools for and vision resolution. They are also used as gene therapy tools for individuals with such disorders. The present sequence is human GRK7

The invention relates to new isolated NOVX polypeptides, the genes coding them or sequences having at least 95% identity to the amino acid cor nucleotide sequences. The NOVX polypeptide is useful as a therapeutic, particularly in the manufacture of a medicament for treating a syndrome associated with a human disease, which includes a pathology associated correcting, preventing or alleviating pathology associated with NOVX polypeptide is particularly useful for treating, preventing or alleviating pathology associated with NOVX colypeptide in a mammal, e.g. a human. The NOVX nucleic acid and polypeptide are especially useful for treating or preventing e.g. colypeptide are especially useful for treating or preventing e.g. colypeptide are especially useful for treating or preventing e.g. cancer; disbetes, obssity, cancers (e.g. lymphoma, uterus cancer or prostate completes, dyslipidemias, amorexia, wasting disorders, Alzheimer's disease, carkinson's disorder, cachexia, cardiomyopathy, AIDS, asthma, Crohn's conditions to disorder, cachexia, cardiomyopathy, AIDS, asthma, Crohn's conditions the protein is useful in gene therapy for treating the above conditions. These are also useful in developing powerful assay system for conditional analysis of various human disorders, as well as in diagnostic applications. This sequence represents one of the NOVX genes of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            12-JUL-2001; 2001US-0304879P.

New polynucleotides encoding human proteins that share sequence similarity with animal kinases e.g. G-protein coupled receptor kinases, useful for drug screening, diagnosis and in gene therapy of biological

Disclosure; Page 33-34; 34pp; English.

The present cDNA sequence encodes a human G-protein coupled receptor kinase (GRX), also designated NHP (novel human protein) in the specification, which is shown in the sequence listing. The invention comprises novel human nucleotide and protein sequences which have similarity to G-protein coupled receptor kinases. Oligonucleotides derived from the nucleotides of the invention are useful as hybridisation probes for screening libraries and assessing gene expression patterns. The nucleotides of the invention are also useful in drug screening and gene therapy for the modulation of GRK expression. The nucleotides of the invention can be used to genetically engineer host cells to express GRK products in vivo. The nucleotide sequences of the invention are also useful in addressable arrays for identifying and characterising the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      temporal and tissue specific expression of a gene and in microarrays to screen collections of genetic material from patients who have a particular medical condition. The proteins of the invention are useful for generating antibodies, as reagents in diagnostic assays, for identifying other cellular gene products related to GRK, and as reagents in assays for screening for compounds that are useful in the treatment of mental, biological or medical disorders/diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 2249 BP; 582 A; 577 C; 608 G; 482 T; 0 U; 0 Other;

(I) has cytostatic, antidiabetic, neuroprotective, nootropic, cardiovascular, anti-Parkinsonian, cardiant, vasotropic and antiasthmatic activities, and can be used in gene therapy. (I) can be regulated to treat cancer, diabetes, a central nervous system (CNS) disorder (e.g. anxiety or mood disorders, Alzheimer's disease and Parkinson's disease), cardiovascular disorders (e.g. congestive heart failure, myocardial infarction, ischaemic diseases of the heart or hypertensive vascular disease), asthma and chronic obstructive pulmonary disorder (COD). GRX molecules are useful in screening for agents that regulate or decease the activity of a GRX. GRX sequences may also be used for determing diseases and abnormalities.

The present cDNA sequence encodes a human G-protein coupled receptor CC kinase (GRK), also designated MHP (novel human protein) in the Specification, which is claimed in the invention. The invention comprises CC novel human nucleotide and protein sequences which have similarity to G-cc novel human nucleotide and protein sequences which have similarity to G-cc nucleotides of the invention are useful as hybridisation probes for CC corrections of the invention are useful as hybridisation probes for CC correctides of the invention are also useful in drug screening and gene CC therapy for the modulation of GRK expression. The nucleotides of the CC invention can be used to genetically engineer host cells to express GRK CC products in vivo. The nucleotide sequences of the invention are also useful in addressable arrays for identifying and characterising the cc temporal and tissue specific expression of a gene and in microarrays to.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAH78797 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          G-protein coupled receptor kinase; GRK; human; ss; gen drug screening; gene expression characterisation; NHP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human G-protein coupled receptor kinase 1 cDNA sequence

The proteins of the invention are useful for generating antibodies, as reagents in diagnostic assays, for identifying other cellular gene products related to GRK, and as reagent in assays for screening for compounds that are useful in the treatment mental, biological or medical disorders/diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1662 BP; 420 A; 410 C; 479 G; 352 T; 0 U; 1 Other;

The invention relates to human kinase proteins that are related to G-CC protein coupled receptor kinase subfamily. Human kinase gene is located CC on chromosome 3. The kinase peptide and nucleic acid are useful in the CC development of human therapeutic and diagnostic compositions. The peptide CC valuable to the field of pharmaceutical development to identify and cC characterise modulators of the kinase. The proteins may also be used to CC raise antibodies or to elicit an immune response, as a reagent in assays CC designed to quantitatively determine levels of the protein in biological CC preferentially expressed (either constitutively or at a particular stage CC kinase proteins are also useful for providing a target for diagnosing a cdisease or predisposition to disease mediated by the peptide. The nucleic acid molecules are useful for probes, primers, chemical intermediates and CC in biological assays. The nucleic acids are also useful in making vectors containing the gene regulatory regions of the nucleic acid molecules and cfor drug screening to identify compounds that modulate kinase nucleic containing the gene regulatory regions of the nucleic acid molecules and ccid expression. The present sequence is human kinase cDNA expressed in Skins, germinal center B cells, colon, kidney and lung
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated human kinase proteins and nucleic acids, useful as a major target for drug action and development, particularly for screening modulators of the kinase peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 4; Fig 1; 87pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    01-JUN-2000;

Nucleic acids encoding human kinase polypeptides, useful for preventing diagnosing and/or treating e.g. cancer, immune, cardiovascular and neuronal-associated diseases, and microbial infections.

Example 1; Fig 1; 433pp; English.

AAS06701-AAS06757 encode for novel human protein kinases #1-57. The novel CC protein kinases have been identified as members of the tyrosine or CC serine/threonine kinase (PTK and STK) families. The polymucleotides concoding protein kinases and the polypeptides may be used in the prevention, diagnosis and treatment of diseases associated with the protein kinase expression. For example, they may be used to treat concers (e.g. atherosclerosis), metabolic diseases (e.g. diabetes), disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes), concers (e.g. schizophrenia), neurodegenerative disorders (e.g. firemune related diseases (e.g. rheumatoid arthritis), neurological confiders (e.g. schizophrenia), neurodegenerative disorders (e.g. firemune related productive disorders (e.g. asthma), infectious confiders (e.g. schizophrenia), neurodegenerative disorders (e.g. asthma), and reproductive disorders (e.g. infertility). Additionally, polymucleotides encoding protein kinases may be used for conjupeptides may be used as antigens in the production of antibodies against the protein kinases and in assays to identify modulators of control kinases and as NMA probes and as assays to identify modulators of control kinases and in assays to identify modulators of control kinases and in assays to identify modulators of control kinases and in assays to identify modulators of control kinases and in assays to identify modulators of control kinases and in assays to identify modulators of control kinase and as NMA probes and in assays to identify modulators of control kinases and in assays to identify modulators of control kinase and as many activity. protein kinase expression and activity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New G-protein coupled receptor kinase polypeptides and polynucleotides, useful in identifying modulators of the enzyme for treating cancer, diabetes, a central nervous system disorder, a cardiovascular disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           disorder (e.g. anxiety or mood disorders, Alzheimer's disease and Parkinson's disease), cardiovascular disorders (e.g. congestive heart failure, myocardial infarction, ischaemic diseases of the heart or hypertensive vascular disease), asthma and chronic obstructive pulmonary disorder (COPD). GRK molecules are useful in screening for agents that regulate or decease the activity of a GRK. GRK sequences may also be used for detecting diseases and abnormalities or susceptibility to diseases and abnormalities related to the presence of mutations in the nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence encodes a human G protein-coupled receptor kinase (GRK) protein (I) (I) has cyrostatic, antidiabetic, neuroprotective, nootropic, cardiovascular, anti-Parkinsonian, cardiant, vasotropic and antiasthmatic activities, and can be used in gene therapy. (I) can be regulated to treat cancer, diabetes, a central nervous system (CNS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; Fig 1; 129pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   asthma.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel disease associated gene and its us. The gene and its encoded protein are useful for diagnosis of and screening for drugs for heart diseases, cancers and omentopathy. The current sequence represents the human RGSNO9 encoding DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 6; Page 81-82; 96pp; Japanese.

                                                                                                                                                                                    cc sensitivity, visual resolution or in adapting to changes in light cc intensity, Oguchi disease or dominant congenital stationary night continuess), Pineal gland activity (e.g., chromobiological desynchrony, cc depression, anxiety, mental fogginess, memory loss, headaches, fatigue, cc or jet lag). Agonists of GRK7 polypeptide activity may be used to treat cc activity is beneficial, e.g., decreased colour sensitivity or other come photoreceptor mediated diseases. The GRK7 proteins are also useful in the cc preparation of a medicament for treating a condition or disease related cc preparation of a medicament for treating a condition or disease related cc probes to screen for inherited defects in colour vision, circadian rhythm as molecular crows and vision resolution. They are also used as gene therapy tools for condition with such disorders. The present sequence is human GRK7 OK6

                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to novel human cone opsin kinase (G-protein coupled receptor kinase 7; GRK7) and their corresponding polynucleotides. The invention further relates to a method of identifying compounds that alter the inhibition of GRK7 polypeptide activity which involves mixing a test compound with GRK7 protein and an inhibitory polypeptide and determining if the test compound alters the inhibition of GRK7 protein activity by the inhibitory polypeptide. GRK7 sequences are useful for treating conditions related to cone visual signalling (e.g., night blindness, colour blindness, difficulty with colour vision, visual blindness, colour blindness, difficulty with colour vision, visual
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Identifying compounds that alter inhibition of come opsin kinase polypeptide activity for treating a conditions related to come visual signaling, comprises mixing a compound with a cone opsin kinase and with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 2002-723307/78.

mulectides of the invention are useful as hybridisation probes for coreening libraries and assessing gene expression patterns. The nucleotides of the invention are also useful in drug screening and gene therapy for the modulation of GRIK expression. The nucleotides of the convention can be used to genetically engineer host cells to express GRIK convention can be used to genetically engineer host cells to express GRIK convention are also the convention are also convention in addressable arrays for identifying and characterising the convention are conventional and tissue specific expression of a gene and in microarrays to conventional medical condition. The proteins of the invention are useful conventional medical condition. The proteins of the invention are useful conventional patterns who have a conventional medical condition. The proteins of the invention are useful conventional patterns who have a conventionaly conventional patterns who have a conventional patterns who have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present cDNA sequence encodes a human G-protein coupled receptor kinase (GRK), also designated NHP (novel human protein) in the specification, which is claimed in the invention. The invention comprises novel human nucleotide and protein sequences which have similarity to G-protein coupled receptor kinases. Oligonucleotides derived from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New polynucleotides encoding human proteins that share sequence similarity with animal kinases e.g. G-protein coupled receptor kinases, useful for drug screening, diagnosis and in gene therapy of biological

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
